KNX Input

KNX

It represents an input coming from the KNX bus.

- **Input type**: the datatype of the value to read from KNX.
- **KNX group**: the KNX group address.
- **Value at startup**: policy to determine which value to assign to the input at the beginning of the execution of the logic scheme.
  - *'Read current value':* indicates that the input starting value is equivalent to the value of the KNX group.
  - *'Wait for a new telegram':* indicates that the input doesn't take any value until the receiving of a new telegram.
  - *'0 until first telegram':* indicates that the input takes value 0 until the receiving of the first telegram.
  - *'1 until first telegram':* indicates that the input takes value 1 until the receiving of the first telegram.
